OBJECTIVE

Computer Science undergraduate specializing in Data Science, with project experience spanning data pipelines, database modeling, machine learning, and BI dashboarding using Python, SQL, and Power BI. Seeking a Data Engineering or Data Science internship/entry-level role to build and apply data infrastructure and analytical models on real-world problems.

TECHNICAL SKILLS

Core: Python, SQL, Pandas, NumPy, Data Structures & Algorithms, OOP
Data Engineering: SQL, RDBMS, Databases, Data Modeling, Data Cleaning & Pipelines, Git
Machine Learning: Scikit-learn, Feature Engineering, Logistic Regression, Random Forest, Model Evaluation (ROC-AUC, Precision/Recall/F1), ANN, CNN
Visualization & Analytics: Power BI, DAX, Matplotlib, Plotly, Excel, Google Sheets
Also familiar with: Java, C++, HTML/CSS, Jupyter, Streamlit

EDUCATION

Aditya College of Engineering and Technology — Expected Graduation: 2028
B.Tech, Computer Science and Engineering (Data Science) | CGPA: 8.11 / 10

PROJECTS

Customer Churn Prediction | *Python, scikit-learn*

- Built and compared Logistic Regression and Random Forest models to predict customer churn on a 7,043-row telecom dataset, achieving 0.84 ROC-AUC and 80.6% accuracy.
- Engineered features from raw billing and service data — tenure, contract type, charges, service subscriptions — and evaluated models using precision, recall, F1, and ROC-AUC.
- Identified key churn drivers (contract type, tenure, fiber-optic service) through feature importance analysis, translating model output into retention insights.

PhonePe Transactions Dashboard | *Power BI, DAX*

- Cleaned and analyzed a public transaction dataset and built a 5-page interactive Power BI dashboard covering Money Transfer, Recharge & Bills, Loans, and Insurance.
- Designed KPI cards, trend lines, charts, and slicers to surface category-wise insights through dynamic multi-dimensional filtering.
- Structured the underlying data model and DAX measures to support accurate reporting and trend analysis across dashboard pages.

Student Academic Risk Intelligence System | *Python, Pandas, NumPy, Streamlit, Plotly*

- Built an interactive dashboard to analyze student academic performance and flag Pass, Fail, and Dropout outcomes.
- Engineered risk features — grade trend, parental education average, support score, alcohol consumption average — into a composite risk score using Pandas and NumPy.
- Developed statistical analysis and visualizations for pass rate, at-risk students, dropout counts, study-time impact, grade correlations, and internet-access trends.

AgriConnect | *React, JavaScript, Python*

- Built a marketplace prototype connecting Farmers/FPOs with customers and bulk buyers through role-based dashboards, produce listings, buyer discovery, and order workflows.
- Developed a Python backend handling user roles, marketplace interactions, order tracking, and logistics data.
- Built a rule-based multilingual (English, Telugu, Hindi) assistant for market prices, buyer matching, and order lookups.

CERTIFICATIONS

- Google Data Analytics Professional Certificate — Google
- Cisco C++ Certifications (Essentials 1 & 2, Advanced) — Cisco Networking Academy
- From Relational Model (SQL) to MongoDB's Document Model — MongoDB
- IT Specialist – HTML and CSS — Certiport (a Pearson VUE business)
- Oracle Java Foundations — Oracle
